The Fund's objective may be achieved through investment predominantly in developed markets equity securities across all industry sectors.

The Fund may invest directly or indirectly (via collective investment schemes) up to 100% of its Net Asset Value in equities and equity-related securities, including, preferred stocks and warrants rights (which are issued by a company to allow holders to subscribe for additional securities issued by that company), as well as depository receipts for such securities, which are listed on a recognised exchange worldwide.

The Fund may also invest up to 10% of its Net Asset Value, in aggregate, in the units and/or shares of one or more collective investment schemes including money market funds and exchange traded funds in accordance with the requirements of the Central Bank.

For cash and broader portfolio management purposes, the Fund may hold high levels of cash. The Fund may be exposed to all currencies (both OECD and non-OECD), through both purchases and sales of securities.

The Fund may also retain substantial amounts in cash or ancillary liquid assets (including short term money market instruments and cash deposits) pending investment or reinvestment. Financial derivative instruments may be traded on a recognised exchange or over-the-counter.

The Fund is considered to be actively managed in reference to the MSCI ACWI Total Return Index (USD) (the "Benchmark") by virtue of the fact that it uses the Benchmark for performance comparison purposes and for the purpose of the calculation of performance fees. However, the Benchmark is not used to define the portfolio composition of the Fund and the Fund may be wholly invested in securities which are not constituents of the Benchmark.

Risk and Reward Profile of the Fund

The indicator above is not a measure of the risk of capital loss, but a measure of the Fund's price movement over time.

- It is based on historical data and thus may not be a reliable indication for the future.
- The indicated risk category is not guaranteed and may shift over time.
- The indicator is designed to help investors understand the uncertainties both for loss and for growth that may affect their investment. In this context, the lowest category does not mean "risk free".
- The Fund is classified in the category indicated above due to the past behaviour of its target asset mix. The Fund does not provide its investors with any guarantee on performance, nor on the monies invested in it.

In addition to the risk captured by the indicator, the overall Fund value may be considerably affected by:

- **Market Risk** - the Fund invests in shares of companies, and the value of these shares can be negatively affected by changes in the company or its industry or the economy in which it operates.
- **Liquidity Risk** - the risk stemming from the lack of marketability of an investment that cannot be bought or sold quickly enough to prevent or minimise a loss.

- **Investment Risk** - There is no guarantee that the investment objective of the Fund will be achieved. A capital loss of some or all of the amount invested may occur.
- **Currency Risk** - the Fund may be exposed to currency risk in relation to the valuation of assets held in currencies other than its base currency.
- **Derivatives Risk** - Derivatives are highly sensitive to changes in the value of the assets they are based on. The use of derivatives may result in gains or losses that are greater than the original amount invested.
- **Counterparty Risk** - The insolvency of any institutions providing services, such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.
- **Common Stocks Risk** - The value of a company's stock may fall as a result of factors relating directly to that company, such as decisions made by its management or lower demand for the company's products or services. A stock's value may also fall because of factors affecting not just the company, but companies in the same industry or in a number of different industries, such as increases in production costs. The value of a company's stock may also be affected by changes in financial markets that are relatively unrelated to the company or its industry, such as changes in interest rates or currency exchange rates.
- **Concentration Risk** - Certain Funds may invest a large proportion of total assets in specific assets or in specific markets. This means that the performance of those assets or markets will have a substantial impact on the value of the Fund's portfolio.
