The indicator above is not a measure of the risk of capital loss, but a measure of the Fund's price movement over time.

- It is based on historical data and thus may not be a reliable indication for the future.
- The indicated risk category is not guaranteed and may shift over time.
- The indicator is designed to help investors understand the uncertainties both for loss and for growth that may affect their investment. A category 1 fund is not a risk free investment, the risk of loss is small but the chance of making gains may also be limited. With a category 7 fund, the risk of losing money is high but so also is the possibility of making gains.
- The Fund is classified in the category indicated above due to its target asset of mix of highly liquid global equities.
- The Fund does not provide its investors with any guarantee on performance, nor on the monies invested in it.

value may be considerably affected by:

- Interest Rate Risk** – the Fund invests primarily in bonds and other fixed income securities. The value of these securities generally falls when interest rates rise, which may have a negative impact on the Fund's value.
- Credit Risk** – the issuers of bonds or other debt instruments held by the Fund may fail to meet their payment obligations, leading to a decline in the value of those securities.
- Exchange Rate Risk** - changes in exchange rates between the currencies of investments held by the Fund and the Fund's base currency may negatively affect the value of an investment (only for unhedged share classes).
- Operational Risk** - the Fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets.
- Liquidity Risk** - Some fixed income instruments may be less liquid, particularly in adverse market conditions. This may affect the Fund's ability to sell investments at the desired time or price, potentially leading to losses.
